

In the studio, the greatly enhanced sensitivity of a finely crafted condenser microphone is unparalleled in capturing the nuances of vocal and instrumental performances. The DR-CX1 is an excellent choice for home/project studios who require an affordable solution for superb miking of voice and instrumental sound sources. It starts with a custom 16mm diaphragm with representation across the audible frequency spectrum as well as extended dynamic range and high SPL handling. The DR-CX1 also has powerful transient response, and is therefore a good choice for applications like bass and drum miking. For vocals, its cardioid response offers good directionality and isolation, and responds well with proximity effect allowing a singer to “work” the mic for outstanding performances.

- Accurately captures every nuance of your performance
- Ideal for project/home studio applications
- High SPL handling capacity and superior transient response
- Custom 16mm diaphragm for extended dynamic range
- Cardioid polar pattern improves sound source isolation
- Pivoting, threaded stand mount attaches securely for easy and precise placement
